

**Success factors of
our quality lubricants.
Since 1847.**

Meguin through the ages. The people developed the traditional company from a manufacturer of greases for horse hooves into an internationally active mineral oil company.

The human factor

We have the products. We have the technology. We have the capacity. And above all: We have the people. Their ideas, their creative power and their commitment form the basis for our continual growth. In order to safeguard this, we regularly create new jobs and continue to commit ourselves to the location of Germany. Quality lubricants made in Germany. Manufactured in our state-of-the-art production, filling and packaging plants at our Saarlouis location.

The tradition factor

The roots of our mineral oil company stretch back into 1847. Lubricants for carriages, grease for horse hooves and linseed oils were in great demand as the pace of industrialization in Germany increased. It was a demand that back then the company's founder, Gustav Meguin, was well able to satisfy. This profound understanding of the needs of customers remains one of the pillars of our success.

The product range factor

Our comprehensive range and our quality have been well known around the world for decades. We offer lubricants for cars, commercial vehicles and industry, including numerous special products such as industrial gear oils. We also play an important role in the area of motor oil development and production, including with oils for low speed pre-ignition (LSPI) or fuel economy oils that reduce fuel consumption.

The capacity factor

We are constantly investing in the expansion of our production capacity: We currently have a tank storage capacity of 18 million liters and our raw material and recipe tanks currently number over 140 storage tanks. A state-of-the-art matrix distributor ensures efficient material flow. Innovative technology provides for optimized operational processes and supports filling operations that cover a range of 250 ml small containers right through to 205 l large containers.

The internationality factor

The world is our market! We do not leave opportunities for growth arising from the opening of new global markets up to chance. Instead, we rely on our expertise, vision and the consistently high quality of our products all around the world in order to position Meguin globally together with our international sales partners. We are there for you – wherever and whenever you need us. You can put your trust in our decades of experience on the international markets.

Made in Germany quality: Our products are manufactured in Saarlouis and then sent around the world.

Meguin's customers hail from all around the world. In addition to our emphasis on cars and commercial vehicles, we are also active in branches such as mining, manufacturing trades and industry.

Monitoring from the very beginning: In the end, the quality of the raw materials has a critical effect on the quality of our final products.

The progress factor

Development means teamwork. We involve our customers and work together to advance projects. Our oil specialists are valuable partners in the event of requests for special products. We also maintain close contact with the automotive industry because only those companies that satisfy the specifications of the vehicle manufacturers obtain manufacturer approval for the motor oil. There is a reason that our oils have the most current approvals. Progress also means always looking at least one step ahead. We therefore continue to develop innovations in order to start building tomorrow's success today. Together with you.

The quality factor

With long-term partnerships, we secure the supply of high-quality base oils, additive packages and all other ingredients for production. In addition, research and development is performed in its entirety in our own laboratory with state-of-the-art equipment. It is where we implement a regular regime of monitoring of the quality of our products. This begins as early as the selection of all raw materials. Only high-quality ingredients make it into our products. Which means you only get the best quality. From the delivery to the shipment, all raw materials and final products are subject to strict inspections. Furthermore, the certifications in accordance with DIN EN ISO 9001, DIN EN ISO 14001 and DIN EN ISO 50001 further emphasize our promised quality.

The environment factor

Environmentally sound manufacturing processes and compliance with the strictest environmental specifications are of the utmost importance to us. A striking example here is the complex pigging technology in our central recipe storage tanks with matrix distributor. Here the lines of our eight main production lines are cleaned with the greatest efficiency upon every recipe change before filling the new oil. The result: considerably less flushing oil. An investment that has positive environmental effects. Environmental compatibility is also the highest priority for our products. We maintain close contact to the Federal Environment Office for this reason. Further proof: The Fraunhofer Institute for Chemical Technology has proven the environmentally friendly effects of additives on oils and fuels.

Lubricants with the greatest benefits –
developed in our own laboratory.
For customers from the SME and industry sectors.
